

FETS View™

Facility Emissions Tracking System

Managing Emissions Risk & Liability

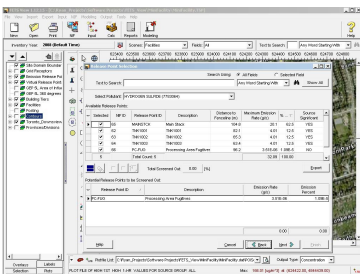

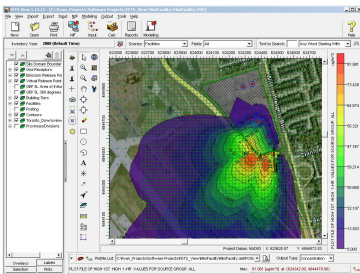

FETS View is an Emissions Tracking System (FETS) that makes it easier than ever before to develop and track facility wide emissions inventories and manage the demands of today's changing reporting requirements.

Your Relief is Finally Here...

FETS View **integrates air dispersion modeling** (AERMOD or CALPUFF) with **emissions inventory tracking** capabilities in one easy-to-use software management system, allowing you to quickly develop **complete and accurate facility wide emissions inventories**.

- Comprehensive suite of **emissions calculators** (AP42, NEI, and EIIP)
- Submit emissions inventories with confidence **ensuring regulatory compliance**
- Easy access to a wide range of **professional reports**
- Proactively evaluate mitigation and **emission reduction strategies**
- **Increase productivity** and save time and money

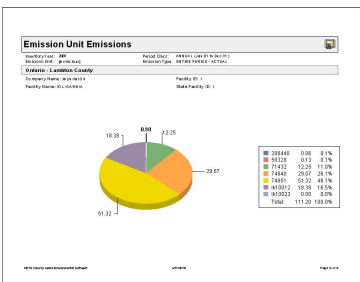

Face Today's Challenges with Confidence using FETS View

FETS-EI View – Efficiently manage **facility wide emissions** including thousands of individual emission sources and hundreds of chemical-specific emissions.

FETS-RT Web – Delivers **real-time and forecast based modeling capabilities** that can be used to track real-time facility emissions based on predicted meteorological data.

FETS-GHG Web – Tracks **Greenhouse Gas (GHG) compliance** and proactively identifies surplus opportunities for participation in the evolving trade markets and evaluation of possible mitigation strategies.
