Installation

Can I install the software and/or save my projects in a network drive?

Lakes Environmental software products are designed to be installed and run on your local computer only. The software should not be installed on a network drive, and projects should <u>not be run from a network drive</u>.

If you need to make projects available on your network, it is recommended that you use the backup option (File | Backup | Save to ZIP) and place the backup file on the network.
