

General

How can I change the calm wind definition?

By default, calm winds are defined as less than 1 knot, or less than 1 m/s depending on the units you are using. It is possible to change this definition by editing the wind classes:

1. Click the wind classes button.

2. Edit the low end of the first wind class.

General

Wind Classes

Wind Speed Units

m/s Knots

#	From (>=)	To (<)
1	0.5000	2.1000
2	2.1000	3.6000
3	3.6000	5.7000
4	5.7000	8.8000
5	8.8000	11.1000
6	11.1000	-

Buttons: Load... Default Add Insert Delete Save... Help Cancel OK

All values less than the lower end of the first class will be considered calm.

Note: When setting your calm threshold it is a good idea to keep in mind the level of precision for wind speeds in your met file.
