

Latest Features AERMOD View™

Complete Air Dispersion Modeling System for AERMOD

Advanced Graphical Interface

Fully integrated interface combining easy to use graphical tools (e.g., sources, buildings, and receptors), seamless model run, and automated contouring and posting of results.

Export to Google Earth™

This exciting feature allows you to export your buildings, sources, receptors and contours into Google Earth giving you a more realistic image of where pollutants will impact surrounding areas.

Name	X	Y	Z	Other Parameters
Source 1	1000	1000	100	...
Source 2	2000	2000	200	...
Source 3	3000	3000	300	...

Import/Export Sources from/to Excel

Sources can be imported from and exported to a Microsoft Excel spreadsheet making manipulation of a large number of sources easier than ever before!

Powerful 3D Visualization

Complete 3D visualization of your entire modeling area. Sources, buildings, and contour results are displayed in context with the surrounding terrain.

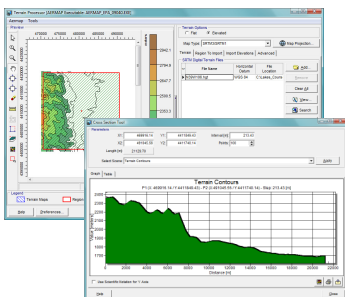

AERMOD Parallel

Included in the package, at no extra cost, is AERMOD MPI for 8-core, Lakes Environmental's parallel version of AERMOD. This significantly cuts down on model run times, while still giving the high quality results you expect from AERMOD View.

Name	X	Y	Z	Other Parameters
Chemical 1	1000	1000	100	...
Chemical 2	2000	2000	200	...
Chemical 3	3000	3000	300	...

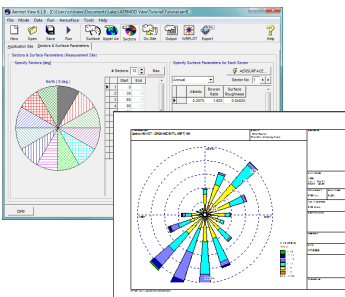

Multi-Chemical Utility

This utility will boost your productivity drastically by allowing you to specify emissions from several pollutants emitted by the same source. No need to setup different AERMOD projects for each pollutant!

Terrain Processor

Advanced terrain processing capabilities are offered for several terrain data file formats such as NED, SRTM, and USGS DEM. Automated download of terrain data files from webGIS. SRTM3 Terrain data at 90 m resolution available worldwide.

Complete Meteorological Pre-Processors

Several tools are available for easy pre-processing of meteorological data for AERMOD and ISC models.

The AERSURFACE utility allows you to automatically calculate the required surface characteristics.
